

Chemical Safety Data Sheets (SDS) Statement

Silson are occasionally asked to provide SDS or MSDS for the thin membranes and other related products.

SDS are intended to provide users with the information required to make risk assessments so that appropriate emergency procedures and storage conditions can be devised. Silson products are not considered chemicals and there are no particular hazards associated with them and, as such, SDS are not provided.

Standard Silson products are manufactured under clean-room conditions and, to maintain the high level of cleanliness at which they leave the facility, it is advised to keep them within sealed packaging until the time of use.

Date: 17th July 2019

Signed

A handwritten signature in black ink, appearing to read "P. Anastasi". The signature is fluid and cursive, with a long horizontal stroke at the end.

Peter Anastasi

Managing Director
